Project Scope Document

Tour Packages Website & Admin Dashboard

Prepared for	[Client name / Company name]
Prepared by	[Your name / Studio name]
Date	30 October 2026
Version	1.0 (Draft for discussion)
Project type	Business website with content-managed package catalogue and enquiry system

This document defines what will be built, what the client needs to provide, what is not included, and how the project will be delivered and paid for. It is meant to be reviewed together and signed off before work begins, so that both sides share the same expectations.

1. Project Overview

The client sells holiday tour packages from India to destinations across Europe and currently has no website. The goal is a fast, professional, mobile-friendly website that builds credibility, showcases packages, and turns visitors into enquiries, together with a simple dashboard that lets the client manage packages without a developer.

1.1 Objectives

- Establish an online presence and brand credibility for the business.
- Present tour packages clearly, with itineraries, pricing and images.
- Capture enquiries (form, WhatsApp, phone) and deliver them to the client reliably.
- Let the client add, edit, publish and remove packages independently.
- Rank for relevant searches (for example "Europe tour packages from India") through sound technical SEO.

1.2 Reference

The client shared lpoholidays.in as a reference. That site is a large, multi-office operation with a blog, per-country travel guides, theme-tour hubs and an external payment link. This project covers the five core pages plus the dashboard described below. Features seen on the reference site that are not listed in Section 4 or 5 are treated as out of scope or as optional add-ons (Sections 9 and 10).

2. Site Map & Pages

Page	Purpose	URL
Home	First impression; featured packages, destinations, trust signals, enquiry call to action	/
Packages (listing)	Browse, search and filter all published packages	/packages
Package detail	Full details of one package with enquiry form	/packages/[slug]
Gallery	Photo gallery of destinations and trips	/gallery
About Us	Company story, team, credentials, values	/about
Contact Us	Contact form, phone, email, WhatsApp, map	/contact
Privacy Policy / Terms	Legal pages (text supplied by client)	/privacy, /terms
Admin dashboard	Private, login-protected management area	/admin

3. Global Features (all public pages)

- **Header and navigation:** logo, main menu, a prominent "Enquire / Request Callback" button; collapses to a mobile menu.
- **Footer:** quick links, contact details, registered address, social media links, policy links.
- **Floating WhatsApp button** and click-to-call on mobile, with a pre-filled WhatsApp message.
- **Responsive design:** built mobile-first; tested on current Chrome, Safari, Edge and Firefox, and on common phone and tablet sizes.
- **Performance:** optimised and lazy-loaded images, target Google Lighthouse performance score of 85+ on mobile for key pages.
- **Basic SEO:** unique page titles and meta descriptions, clean URLs, XML sitemap, robots.txt, Open Graph tags for sharing, image alt text.
- **Analytics:** Google Analytics 4 installation and verified Google Search Console setup.
- **Accessibility basics:** readable contrast, keyboard-navigable menus, labelled form fields.

4. Public Pages: Detailed Requirements

4.1 Home page

- Hero section with headline, background image or slider, and a primary call-to-action.
- Featured packages (chosen from the dashboard using a "Featured" flag), shown as cards.
- Popular destinations strip linking to filtered package lists.
- "Why choose us" section with key numbers and credentials (content from client).
- Testimonials block (static content in this version; dashboard management is an add-on).
- Enquiry call-to-action section and short contact form.

4.2 Packages listing page

- Responsive grid of package cards showing image, title, duration, countries, starting price (and optional original/strikethrough price).
- Filters: country/destination, duration range, budget range. Keyword search by title.
- Sorting: price low-to-high, high-to-low, duration, newest.
- Pagination or "load more" once more than 12 packages exist.
- Only packages marked "Published" are visible.

4.3 Package detail page

- Image gallery/slider, title, duration (nights/days), countries and cities covered, price details.
- Highlights summary and day-by-day itinerary (expandable sections).
- Inclusions and exclusions lists, hotel/stay details, terms and notes.
- Optional departure dates and PDF brochure download.
- Sticky "Enquire now" form and WhatsApp button; the package name is attached automatically to each enquiry.
- SEO-friendly URL, page title and structured data for the package.

4.4 Gallery page

- Masonry or grid layout with lightbox (full-screen view, next/previous).
- Optional category tabs (for example Destinations, Customer Trips).
- Images managed entirely from the dashboard; automatically resized and compressed on upload.
- Video embeds (YouTube links) can be included if requested; no self-hosted video.

4.5 About Us page

- Company story, mission, years of experience, team section (photos and short bios), certifications and registration details (GST, IATA, etc., if applicable).
- Content and images supplied by the client.

4.6 Contact Us page

- Contact form (name, phone, email, message) with spam protection.
- Office address, phone numbers, email, working hours, embedded Google Map, social links, WhatsApp link.

4.7 Enquiry system

Used by the Home, Package detail and Contact forms, and by the callback popup.

Item	Specification
Fields	Name, phone (India format validated), email, city, number of travellers, travel month (optional), message, package (auto-filled)
Storage	Every enquiry is saved to the database with date/time and source page

Item	Specification
Notification	Email sent to the client's business email for each new enquiry; optional WhatsApp-link shortcut in the dashboard
Protection	Spam protection (honeypot and/or Cloudflare Turnstile), rate limiting, server-side validation
Confirmation	On-screen thank-you message; optional auto-reply email to the customer

5. Admin Dashboard

A private, password-protected area at /admin for the client to manage website content. Designed for non-technical users, with clear forms and confirmation prompts.

5.1 Modules

Module	Capabilities
Login & security	Email + password login, password reset by email, automatic session expiry, all admin actions require authentication
Packages	Add, edit, delete (with confirmation), duplicate a package, publish / unpublish (draft), mark Featured, search and filter the list
Package images	Upload multiple images per package, choose a cover image, reorder, delete; auto-resize and compression
Gallery	Upload multiple images at once, assign category, caption, reorder, delete
Enquiries	List with date, name, phone, package, status (New / Contacted / Closed); click-to-call and WhatsApp shortcuts; search; export to CSV
Dashboard home	Counts of packages, new enquiries and recent activity

5.2 Package data fields

Field	Type	Notes
Title	Text	Required; used to create the URL
Destinations / countries	Multi-select tags	Used for filters and destination strips
Duration	Nights and days	For example 9 nights / 10 days
Price	Number	"Starting from" price; optional original price for strikethrough; or "On request"
Summary and highlights	Rich text / list	Shown on cards and top of detail page
Itinerary	Repeatable day blocks	Day number, title, description
Inclusions / Exclusions	Lists	Add and remove items freely
Hotels / stay details	Text	Optional
Departure dates	Date list	Optional
Images	Image upload	Multiple; one cover image
Brochure	PDF upload	Optional
Status flags	Toggles	Published / Draft, Featured

5.3 User roles

One administrator account is included. Additional staff accounts or permission levels are available as an add-on.

6. Technical Approach & Hosting

The site is custom-built (not a template theme) for speed, security and low running cost. The approach below is the planned stack; equivalent alternatives may be substituted if they serve the client better, with no change in scope.

Layer	Planned technology	Purpose
Website / server	Modern server-rendered framework (Next.js or Astro)	Fast pages that search engines can read
Hosting	Cloudflare Pages/Workers or Netlify (commercial-use-friendly plans)	Global CDN, HTTPS included
Database	Managed PostgreSQL (Supabase)	Packages, enquiries, gallery data
Image storage	Cloudflare R2 or Supabase Storage	Package and gallery images
Authentication	Managed authentication service	Secure admin login
Email	Transactional email service (Resend / Brevo free tier)	Enquiry notifications

6.1 Accounts and ownership

- All accounts (domain, hosting, database, storage, email service, analytics) are created in the **client's name**; the developer is given delegated access during the project.
- Source code is delivered to the client at final payment, with a short deployment and handover document.
- Third-party services run on free tiers at launch traffic. The database service may need a paid plan (around US$25/month) as usage grows; the client will be informed before any paid upgrade is required.
- Domain registration (typically ₹600-1,200 per year) and any business email hosting are paid by the client directly.

6.2 Security and data

- HTTPS everywhere; admin routes protected on the server, not just hidden in the interface.
- Row-level access rules on the database so public visitors can only read published content and submit enquiries.
- Input validation on all forms; file-type and size limits on uploads.
- Enquiry data (personal information) stored only in the client's database account; privacy policy page provided.

7. Responsibilities

Client provides	Developer provides
Brand assets: logo, colours, tagline (or request design as add-on)	UI design direction and page layouts for approval
Text content: About Us, company details, testimonials, policy text	Full development of site and dashboard
Content for the first 5 packages (itinerary, inclusions, pricing, images)	Entry of the first 5 packages to demonstrate the workflow

Client provides	Developer provides
Photos for gallery and packages (or approval of stock images)	Image optimisation and gallery setup
Domain, business email and account creation / payments	Setup and configuration on the client's accounts
Single point of contact for feedback and approvals	Testing, deployment, SEO basics, analytics setup
Timely feedback (within 3 working days per round)	Training session (recorded) and handover document

8. Deliverables

- Live, deployed website on the client's domain with SSL.
- Admin dashboard with one administrator account.
- First 5 packages entered; gallery populated with supplied images.
- Google Analytics and Search Console configured.
- Source code repository transferred to the client.
- Recorded walkthrough video (about 20-30 minutes) and a written dashboard guide.
- 30 days of post-launch bug-fix support.

9. Out of Scope

The following are **not included** in the base price. Any of them can be quoted as an add-on or a later phase.

- Online payment gateway integration and online booking (a link to the client's own payment page can be added in the footer/menu).
- Blog, travel-guide pages, theme-tour hub pages (Honeymoon, Family, Group) beyond filters on the packages page.
- Multi-language versions.
- Customer accounts, login, wishlists, reviews submitted by visitors.
- Live availability, inventory, or seat management.
- Logo, branding, copywriting, photography, video production, or paid stock images.
- Content entry beyond the first 5 packages.
- Ongoing SEO, paid advertising, social media management.
- Mobile apps, CRM or accounting integrations.
- Hosting and third-party service fees (paid by the client directly).

10. Optional Add-ons

Add-on	Description	Indicative price (₹)
Blog module	Create and publish articles from the dashboard, with SEO fields	6,000 - 9,000
Payment gateway	Razorpay or Easebuzz checkout with payment confirmation emails	6,000 - 10,000
Testimonials manager	Add and manage testimonials from the dashboard	2,000 - 4,000
Extra admin users / roles	Staff accounts with limited permissions	2,000 - 4,000

Add-on	Description	Indicative price (₹)
Logo and basic brand kit	Logo, colour palette, typography guidance	4,000 - 8,000
Additional package entry	Per package (text and images supplied by client)	400 - 800 each
Multi-language	Second language, per language	8,000 - 15,000
Monthly maintenance	Updates, backups, monitoring, up to 2 hours of small changes	1,500 - 3,500 / month

11. Timeline & Milestones

Estimated duration: **3 to 5 weeks** from receipt of the advance payment and the first batch of content. Client feedback time and content delivery are the main factors affecting the schedule.

Phase	Timing	Output	Approval needed
1. Discovery & setup	Week 1	Final requirements, site map, design direction, account setup	Scope sign-off
2. Design	Week 1-2	Home and Package page designs (desktop and mobile)	Design approval
3. Build	Week 2-3	All pages, database, dashboard, enquiry system	Staging link review
4. Content & testing	Week 3-4	Content entered, cross-device testing, SEO and analytics setup	Content check
5. Launch & handover	Week 4-5	Go-live, training video, documentation, code transfer	Final acceptance

If required content is more than 7 days late, the schedule moves by the same amount, and the developer may re-plan the delivery dates.

12. Investment & Payment Schedule

Package	Includes	Indicative price (₹)
Core build (recommended)	Everything in Sections 3, 4, 5 and 8	40,000 - 55,000
Lean version	Same pages with a simpler visual design, fewer filters, basic dashboard	28,000 - 38,000

The final fixed price will be confirmed in writing after review of the client's content and design expectations, and will not change unless the scope changes. Prices exclude GST where applicable, and exclude domain and third-party service fees.

12.1 Payment schedule

Milestone	Share	Due
Advance	40%	On signing the scope document, before work starts
Design and dashboard approval	30%	After design approval and the staging link is shared
Final payment	30%	Before go-live and transfer of source code and accounts

13. Acceptance, Revisions & Support

- **Revisions:** two consolidated rounds of feedback at the design stage and two at the build stage are included. Additional rounds are billed at ₹500-800 per hour.
- **Change requests:** anything outside this document is written up with a price and timeline impact, and begins only after the client approves it.
- **Acceptance:** the site is considered accepted when all features in Sections 3-5 work as described on the staging site and the client confirms in writing (or has not reported issues within 5 working days of the final review link).
- **Post-launch support:** 30 days of free bug fixes for defects in the delivered scope. New features and content changes after that are covered by a maintenance plan or hourly billing.
- **Intellectual property:** on full payment, the custom code and design for this project belong to the client. Third-party libraries and services remain under their own licences.

14. Assumptions & Risks

Assumption / risk	Impact if it does not hold	Mitigation
Client supplies content and photos on time	Launch date slips	Content deadline agreed at kickoff; stock images as a fallback
Single decision-maker for feedback	Conflicting feedback causes extra revision rounds	Name one approver in writing
Traffic stays within free-tier limits at launch	Paid hosting or database plan required	Client notified before any upgrade; costs listed in Section 6.1
Images are reasonable in size and quality	Slow pages or poor visuals	Automatic compression; guidance sheet on photo requirements
Scope stays as listed	Cost and timeline increase	Change-request process in Section 13

15. Sign-off

By signing below, both parties confirm that they have read this document and agree to the scope, price, payment schedule and terms described.

For the client	For the developer
